

# Aligners

**Simpli5** is an express aligner system that provides a fast, comfortable and convenient solution for minor and intermediate anterior malocclusions. The patient wears five appliances per arch that are programmed with incremental correction to move the teeth to their desired end result. There's one simple-and-attractive fee per arch (upper and lower), which allows you to quote the right treatment cost to your patients. Every Simpli5 treatment can be supplemented with two FREE "refinement" aligners if needed to fine-tune the final results. In this instance, you'll just forward the original set-up models and new impressions to our customer care department. AOA's technical support staff will then contact you to plan the refinement.\*

The **Red, White and Blue (RWB)** aligner system offers a solution to those adult dentition patients who are just outside the normal range of other removable tooth aligning appliances, such as Hawley or Spring type retainers. RWB is ideal for patients who want a simple aesthetic system to correct minor to intermediate incisal tooth malalignments. In addition to being aesthetically pleasing, RWB is very cost effective. AOA will reposition the incisors ideally or as ideal as the malalignment will allow.

\*Two Free Refinements.
